CSE320: Data Communications

Quiz-03 (Set - A)

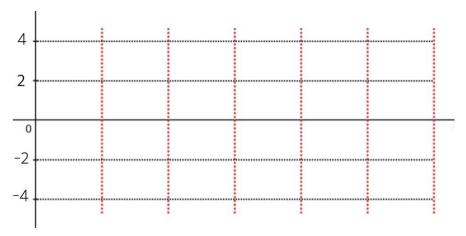

Total Marks: 20

Name: ID: Sec:

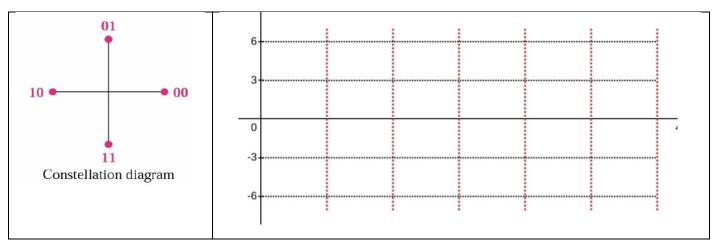

1. For the following Multi-level ASK, find the bit stream form the signal below: [4]

Bit Pattern	Amplitude	6 7	
00	3V	2+	A A A A A A A A A A A A A A A A A A A
01	4V	o	
10	0V	-2 -	$\bigvee\bigvee\bigvee\bigvee$
11	1V	-4 -	VVVV
		-6	

2. Draw the analog signal for the digital bit stream 110100101011 using Multi-level FSK where 2 bits at a time get transmitted. [Amplitude of the Carrier Signal = 2V and phase = 0 rad, Number of Cycles of the signal element for different Bit Patterns: 00- 4, 01- 2, 10- 3, 11- 1] [4]

3. Draw the analog signal for the bit stream 1011001011 using the constellation diagram given below [frequency = 2 for each signal element and amplitude = 6V] [4]

4. Why PSK is superior to FSK? [4]

5. What is coherent FSK and non-coherent FSK? Explain. [4]
